

The HAECO Xiamen Training Center, located next to the Xiamen Gaoqi International Airport, is a 40 million USD investment by the Taikoo (Xiamen) Aircraft Engineering Co. Ltd. Since it was completed in October 2008, the Center stands proud on over 45,000 square meters of land and comprises a five-storey Training and Administration building, a four-storey Practical Training building, a three-storey canteen and recreation center, and 600 furnished apartments in 8 dormitory units.

Blending the unique strengths of HAECO Xiamen and HAECO, and taking advantage of the group resources of aircraft maintenance, landing gear overhaul and engine overhaul companies, the HAECO Xiamen Training Center has progressively developed to its present size and capabilities. The Center is the exclusive one who acquired the HKAR-147, CCAR-147 and EASA Part-147 approvals in March 2002, September 2006 and December 2006 respectively. In addition, it has proved itself again to become the approved examination site for CCAR-66/HKAR-66/EASA Part-66 maintenance personnel licenses.

There is a versatile team of nearly 70 full-time instructors, most of whom are the aircraft maintenance staff with rich experience. They are well-trained instructors with profound knowledge of aircraft system, aircraft type, and instruction technique.

The HAECO Xiamen Training Center supports and renders training capabilities in a multitude of training courses for aircraft types, basic license, component maintenance, practical skills, aviation English, human factors and other aviation maintenance courses. Utilizing a comprehensive facility of well-equipped type course classroom (CBT Classroom), basic license training classroom, "standard practices" workshop and aircraft components, including Rolls-Royce and Pratt & Whitney engines, B747 landing gears, B747-400 airframe, fuel tank, and B747 simulator, the Center can therefore simulate the real aircraft maintenance environment for optimal training effects.

Corner Stone of Your Aviation Career

Students can join the Oversea Aviation Industry Training Program (OAITP) in HAECO Xiamen Training Center and HAECO Xiamen maintenance hangars during the summer and winter vacations. The training program contains the aircraft maintenance mechanical and avionic standard practice, aircraft familiarization course, aircraft system trouble shooting and test, and so on. By applying the theory to practice and with the years of experience fulfilled, the students will stand a good chance of entering into the aviation industry and to be qualified aircraft maintenance personnel.

1st Semester

✈️ Aviation Industrial Study Trip

✈️ Aircraft Maintenance Basic Skill Training (ME/AV)- S1

2nd Semester

✈️ Aircraft Maintenance Basic Skill Training - Structure Repair

✈️ Aircraft Maintenance Basic Skill Training (ME/AV) - S2

3rd Semester

✈️ OJT-Aircraft System Familiarization, Operation and Test

✈️ Aircraft Maintenance Task (Inspection and Trouble Shooting)

Our features

- ✓ A 45,000 square meter training Centre
- ✓ Replication of real aircraft maintenance environment
- ✓ High quality hands-on training utilizing a comprehensive facility
- ✓ With a versatile team of experienced professionals
- ✓ Field trip in HAECO Xiamen aircraft maintenance hangars
